Thermal Camera Notice and Disclaimer

Instruction: Include this disclaimer outside any RPM operating company premise that utilizes Thermal Cameras.

THERMAL CAMERA IN USE FOR TEMPERATURE SCREENING PURPOSES

You are about to enter an area of the building that is equipped with a thermal camera.

The thermal camera will detect your body temperature. Anyone having a body temperature reading of 100.4°F [38°C] and above will have their body temperature and image recorded by the camera.

For health and safety reasons related to COVID-19, you may also be asked to step aside (this could be a random screening) to answer certain questions and confirm your body temperature before being permitted to proceed further into the building.

For any questions or if you wish to exercise any rights, please see our privacy policy at <https://www.rpminc.com/about-rpm/privacy-policy/>.
